

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) A method for processing a product return using a plurality of management systems, comprising:

inspecting the product return to determine a disposition decision for the product return, the disposition decision reflecting the results of the inspection;[[,]]

identifying an activity to be performed for the product based on the disposition decision, the activity comprising at least an additional effort activity and ~~indicating to a first computer based management system the activity to be performed for the product;~~

capturing the disposition decision for the product return in a computer based first management system;

communicating the captured disposition decision from the computer based first management system to a computer based second management system, the computer based second management system ~~performing at least one process related to an entity that returned the product return, and determining the at least one process to be performed depending on the~~ additional effort activity-identified by the disposition decision; and

~~triggering at least one process in the computer based second management system and the activity in the first computer based management system~~

triggering the computer based first management system to perform at least the additional effort activity and the computer based second management system to perform the determined process.

2. (Previously Presented) The method of claim 1, wherein the computer based first management system is a computer based warehouse management system.
3. (Previously Presented) The method of claim 2, wherein the computer based second management system is a computer based customer relationship management (CRM) system, and the at least one process is updating a customer account.
4. (Previously Presented) The method of claim 1, wherein the computer based first management system is a computer based warehouse management system and the computer based second management system is a computer based customer relationship management (CRM) system, and wherein the method further comprises sending a CRM notification from the computer based warehouse management system to the CRM system.
5. (Original) The method of claim 4, wherein triggering comprises updating a customer account with the CRM system based on the CRM notification.
6. (Original) The method of claim 1, wherein the at least one process is performing customer management.
7. (Previously Presented) The method of claim 1, further comprising triggering, in response to the captured disposition decision, at least one process in the computer based first management system, the computer based first management system comprising a computer based warehouse management system.

8. (Currently Amended) A method for processing a returned product, the method comprising:

inspecting the product return to determine a disposition decision for the product return, the disposition decision reflecting the results of the inspection;[[,]]

~~identifying an activity to be performed for the product and indicating to a first computer based management system the activity to be performed for the product;~~

capturing, in a computer based first management system, a decision code representing the determined disposition decision of the returned product, the decision code uniquely identifying a set of activities, at least one of the set of activities comprising an additional effort activity; ~~and~~

communicating the captured disposition ~~decision code~~ from the computer based first management system to a computer based second management system, the computer based second management system ~~performing at least one process related to an entity that returned the product return, and determining the at least one process to be performed depending on the activity~~ set of activities identified by the disposition decision; and

~~triggering each activity identified by the decision code, wherein at least one of the activities is triggered in the first computer based management system and the at least one process is triggered in the computer based computer based second management system~~

triggering the computer based first management system to perform at least the additional effort activity and the computer based second management system to perform the determined process.

9. (Previously Presented) The method of claim 8, further comprising:

providing a unique identifier to identify the returned product; and  
communicating the decision code and the unique identifier from the  
computer based first management system to the computer based  
second management system.

10. (Currently Amended) The method of claim 8, wherein the computer based first management system comprises a computer based warehouse management system, and wherein the triggering further comprises creating, in the computer based warehouse management system, a transfer order for the returned product.

11. (Previously Presented) The method of claim 8, wherein the computer based second management system comprises a customer relationship management (CRM) system, and wherein the triggering further comprises sending, to the CRM system, a CRM notification for the returned product and updating, in the CRM system, a customer account based on the CRM notification for the returned product.

12. (Currently Amended) A method for processing a product return, comprising:

providing a set of decision codes;  
inspecting the product return at a warehouse and selecting a decision code from the set of decision codes; ~~in a computer based first management system, based on an inspection result,~~ the decision code reflecting the results of the inspection; ~~[[.]]~~  
identifying an activity to be performed for the product based on the selected decision code, the activity comprising at least an additional effort activity and indicating to a first computer based management system the activity to be performed for the product;

updating a record, in a computer based second management system, for the product return to include the decision code, ~~selected from the set of decision codes~~ the computer based second management system communicating the decision code to the entity that returned the product return; and

~~triggering a process to be performed, in the computer based second management system and an activity to be performed in the computer based first management system for the product return based on the decision code in the record~~

triggering the computer based first management system to perform at least the additional effort activity and the computer based second management system to perform a process depending on the additional effort activity.

13. (Cancelled)

14. (Original) The method of claim 12, wherein the record comprises a warehouse (WH) request and a unique identifier for the product return.

15. (Currently Amended) The method of claim 12, wherein the triggering further comprises issuing a transfer order for the product return based on the decision code.

16. (Original) The method of claim 15, wherein the method further comprises transferring the product return in response to the transfer order and performing a follow-up activity on the product return.

17. (Previously Presented) The method of claim 12, wherein the method further comprises communicating a disposition decision based on the inspection result to a computer based customer relationship management (CRM) system.

18. (Currently Amended) ~~A computer-readable~~ non-transitory computer-readable medium comprising instructions for carrying out a method for processing a product return, the method comprising:

inspecting the product return to determine a disposition decision for the product return, the disposition decision reflecting the results of the inspection;[[,]]

identifying an activity to be performed for the product based on the disposition decision, the activity comprising at least an additional effort activity ~~and indicating to a first computer based management system the activity to be performed for the product;~~

capturing the disposition decision for the product return in a computer based first management system;

communicating the captured disposition decision from the computer based first management system to a computer based second management system, the computer based second management system ~~performing at least one process related to an entity that returned the product return, and determining the at least one process to be performed depending on the~~ additional effort activity identified by the disposition decision; and

triggering the computer based first management system to perform at least the additional effort activity and the computer based second management system to perform the determined process.

19. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 18, wherein the computer based first management system is a computer based warehouse management system.
20. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 19, wherein the computer based second management system is a computer based customer relationship (CRM) management system, and the at least one process is performing customer management.
21. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 18, wherein the computer based first management system is a computer based warehouse management system and the computer based second management system is a computer based customer relationship management (CRM) system, and wherein the method further comprises communicating a CRM notification from the computer based warehouse management system to the CRM system.
22. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 21, wherein triggering further comprises updating a customer account with the CRM system based on the CRM notification.
23. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 18, wherein the at least one process is performing customer management.
24. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 18, further comprising triggering, in response to the captured disposition decision, at least one process in the computer based first management system, the computer based first management system comprising a computer based warehouse management system.

25. (Currently Amended) ~~A computer-readable~~ non-transitory computer-readable medium comprising instructions for carrying out a method for processing a returned product, the method comprising:

inspecting a returned product to determine a disposition decision for ~~of the~~ returned product, the disposition decision reflecting the results of the inspection;[[,]]

~~identifying an activity to be performed on the product, and indicating to a first computer based management system the activity to be performed for the product;~~

capturing, in a computer based first management system, a decision code representing the determined disposition decision of the returned product, the decision code uniquely identifying a set of activities, at least one of the set of activities comprising an additional effort activity; and

communicating the captured disposition decision from the computer based first management system to a computer based second management system, the computer based second management system ~~performing at least one process related to the entity that returned the product return, and determining the~~ at least one process to be performed depending on the activity-set of activities identified by the disposition decision; and

~~triggering each activity identified by the decision code, wherein at least one of the activities is triggered in the first computer based management system and the at least one process is triggered in the computer based computer based second management system~~

triggering the computer based first management system to perform at least the additional effort activity and the computer based second management system to perform the determined process.

26. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 25, wherein the computer based second management system is a computer based customer relationship management (CRM) system and the triggering further comprises triggering an update to a customer account with the CRM system based on the decision code.

27. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 25, wherein the computer based first management system comprises a computer based warehouse management system, and wherein the triggering further comprises creating, in the computer based warehouse management system, a transfer order for the returned product.

28. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 25, wherein the computer based second management system comprises a computer based customer relationship management (CRM) system, and wherein the triggering further comprises sending, to (CRM) system, a CRM notification to trigger customer management.

29. (Currently Amended) A ~~computer-readable~~ non-transitory computer-readable medium comprising instructions for carrying out a method for processing a product return, the method comprising:

providing a set of decision codes;

inspecting the product return at a warehouse and selecting a decision

code from the set of decision codes, ~~in a computer based first~~

~~management system, based on an inspection result~~, the decision

code reflecting the results of the inspection;[[,]]

identifying an activity to be performed for the product based on the selected decision code, the activity comprising at least an additional effort activity, and indicating to a first computer based management system the activity to be performed for the product;

updating, in a computer based first management system, a record for the product return to include ~~a the decision code from the set of decision codes that corresponds to a disposition decision for the product return~~, the computer based first management system communicating the decision code to the computer based second management system; and

~~triggering, in a computer based second management system, a process to be carried out based on the disposition decision, and an activity to be performed in the first management system for the product return based on the decision code~~

triggering the computer based first management system to perform at least the additional effort activity and the computer based second management system to perform a process depending on the additional effort activity.

30. (Currently Amended) ~~The computer readable~~ computer-readable medium of claim 29, wherein the computer based first management system comprises a warehouse management system, and wherein the record comprises a warehouse request (WHR).

31. (Currently Amended) ~~The computer readable~~ computer-readable medium of claim 29, wherein the computer based second management system comprises a computer based customer relationship management (CRM) system.

32. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 31, wherein the ~~triggering-triggered process~~ comprises triggering the CRM system to update a customer account based on the disposition decision.

33. (Currently Amended) The ~~computer-readable~~ computer-readable medium of claim 29, wherein the method further comprises transferring the product return based on the update of the record in the computer based first management system.

34. (Currently Amended) A system for processing a product return, the system comprising:

a computer based first management module for receiving a decision code and creating, in response to receiving the decision code, a first record relating to the product return, the first record containing the decision code and an identification of an activity to be performed for a product, the activity comprising at least an additional effort activity; ~~the computer based first management module triggering an activity to be performed for the product return based on the decision code; and~~

a computer based second management module for receiving the first record and for initiating an update to a second record in response to receiving the record, and based on the decision code received from the first record, and the computer based second management module updating the second record; and

triggering the computer based first management module to perform at least the additional effort activity and the computer based second management module to perform a process depending on the additional effort activity.

35. (Previously Presented) The system of claim 34, wherein the computer based first management module is a warehouse management module.
36. (Previously Presented) The system of claim 35, wherein the computer based second management module is a customer relationship management (CRM) module.
37. (Original) The system of claim 36, wherein the first record comprises a CRM notification.
38. (Original) The system of claim 36, wherein the second record comprises a customer account.
39. (Original) The system of claim 34, wherein the decision code uniquely identifies a set of activities to be performed in accordance with a disposition decision for the product return.
40. (Previously Presented) The system of claim 34, wherein a unique identifier for the product return is received by the computer based second management module when receiving the first record.
41. (Previously Presented) The system of claim 34, wherein the computer based first management module issues a transfer order to transfer the product return based on the decision code.
42. (Previously Presented) The system of claim 34, wherein an effort code for an additional effort activity related to the product return is received by the computer based second management module when receiving the first record.

43. (Previously Presented) The system of claim 42, wherein the computer based second management module determines, based on the effort code, an effort value to charge a customer account for the additional effort activity.

44. (Cancelled)
